## Device Reboot

Use the Device Reboot screen to reboot one or more Viptela devices.

---

### Screen Elements

- Title bar—Includes tabs for vEdge, Controller, and vManage.
- vEdge tab—Displays a list of all vEdge routers in the overlay network. When you first open the Device Reboot screen, you are in the vEdge tab.
- Controller—Displays a list of all controller devices in the overlay network.
- vManage—Displays a list of all vManage NMSs in the overlay network.
- Reboot button bar.
- Device Groups drop-down with a list of all configured device groups in the network.
- Filter criteria—Sort options drop-down and Search box, for a Contains or Match string.
- Device list table—Select a device to reboot.

The screenshot shows the Viptela vManage web interface. The left sidebar contains navigation options: Dashboard, Monitor, Configuration, Tools, Maintenance, Software Upgrade, Device Reboot, and Administration. The main content area is titled 'Device Reboot' and includes a 'Reboot' button, a 'Device Groups' dropdown menu, and a search bar. Below these is a table listing devices. The table has columns for Hostname, System IP, Site ID, Device Type, Device Model, Reachability, Up Since, Status, and Message. Four devices are listed: vm1, vm11, vm5, and vm6. The 'vm5' row is highlighted. In the top right corner, there is a 'Running Tasks' icon. Blue arrows from the text above point to various UI elements: 'Reboot' points to the Reboot button; 'Device Groups' points to the dropdown; 'vEdge', 'Controller', and 'vManage' point to their respective tabs; 'Search' points to the search bar; and 'Running Tasks' points to the icon in the top right.

	Hostname	System IP	Site ID	Device Type	Device Model	Reachability	Up Since	Status	Message
<input type="checkbox"/>	vm1	172.16.255.11	100	vedge	vedge-sim	reachable	16 Mar 2016 2:36:26 PM PDT	--	--
<input type="checkbox"/>	vm11	172.16.255.21	100	vedge	vedge-sim	reachable	16 Mar 2016 2:27:26 PM PDT	--	--
<input checked="" type="checkbox"/>	vm5	172.16.255.15	500	vedge	vedge-sim	reachable	16 Mar 2016 2:35:11 PM PDT	--	--
<input type="checkbox"/>	vm6	172.16.255.16	600	vedge	vedge-sim	reachable	16 Mar 2016 2:34:01 PM PDT	--	--

## Reboot a Device

To reboot one or more Viptela device in the overlay network:

1. In the title bar, click vEdge, Controller, or vManage.
2. Select one or more devices.
3. Click the Reboot button.

## View Active Devices

To view a list of devices on which the reboot operation has been performed:

1. Click the Tasks icon located in the vManage toolbar. vManage NMS displays a list of all running tasks along with the total number of successes and failures.
2. Click a row to see details of a task. vManage NMS opens a status window displaying the status of the task and details of the device on which the task was performed.
